Table 4: Number and weight of throwaway plastic items organised by recyclability (widely collected for recycling; mostly collected for recycling; poorly collected for recycling; not currently recycled).

Widely collected > 90% of councils will collect for recycling

Mostly collected > 70% of councils will collect for recycling

Poorly collected < 20% of councils will collect for recycling

Not currently recycled = 0% of councils will collect for recycling

Recyclability determined from: UK Household Plastics Collection Survey 2017. Recoup, 2017.

<http://www.recoup.org/p/229/uk-household-plastics-collection-survey-2017> and <https://www.recyclenow.com/what-to-do-with>

Table 5a: Breakdown of the plastic waste items in the different UK waste streams by weight (kg) and weight percentage. Secondary recycling here means: items thrown in the general waste and then recovered for recycling by refuse workers. See table 5c for the references. Totals may not agree because of rounding.

| Single-use packaging: Bottles | | Weight (kg) | % collected for recycling (by weight) | Weight collected for recycling (kg) | % recycled in the UK (by weight) | Weight recycled in the UK (kg) | % exported (by weight) | Weight exported (kg) | % going to landfill (by weight) | Weight going to landfill (kg) | % burned (by weight) | Weight burned (kg) | % secondary recycling (by weight) | Weight secondary recycling (kg) |

Table 5b: Breakdown of the plastic waste items in the different UK waste streams by number and percentage of items. We used the average weight of each plastic item (AW) to convert the data from table 5a in weight to the number of items.

AW= items weight/number of items

Weight collected for recycling/AW = Number of items collected for recycling

Totals may not agree because of rounding.

Table 5c: Summary of the coefficients used to calculate the breakdown of the plastic items in the different UK waste streams in table 5a. These coefficients apply only to quantities measured by weight. The coefficients “recycled in the UK” and “exported” have been calculated by applying the ratio: 63% exported to the coefficient “collected for recycling”. The coefficient “burned” has been calculated by merging the data for incineration and refuse derived fuel (RDF).

All data from: UK Household Plastics Collection Survey 2017. Recoup, 2017.

<http://www.recoup.org/p/229/uk-household-plastics-collection-survey-2017>,
except *, from: Only a third of UK consumers' plastic packaging is recycled. Kate Lyons, The
Guardian, 21 November 2016. <https://www.theguardian.com/environment/2016/nov/21/only-a-third-of-uk-consumer-plastic-packaging-is-recycled>

Table 6a: Estimation of the quantity of petrol, water and energy used to produce the plastic waste and of greenhouse gas emissions. Totals may not agree because of rounding. See table 6b for references.

CO₂eq = carbon dioxide equivalent, a metric used to quantify different greenhouse gases in a common unit. CO₂eq signifies the amount of CO₂ which would have the equivalent global warming impact than the mix of greenhouse gases considered.

ND = no data

* Carton drinks are made of a mixture of paper, aluminium and LDPE. LDPE accounts for 20% of the weight; therefore the weight has been recalculated to account only for the LDPE fraction.

** Used PE data for calculations

*** Used PP data for calculations
